

Canaan Fir

Abies balsamea var. phanerolepis

Height: 45'

Width: 20'-25'

Hardiness: Zone 4

Sun: Full sun

Soil: Well drained

Habit: Dense, pyramidal

Foliage: Lustrous dark green with white stomatic bands underneath

Tolerance: Tolerates heavier soils better than other fir varieties.

Comments: Screening, group planting or as an accent plant.

PLANT INFORMATION

A naturally occurring hybrid brought about by the last glacier that introduced balsam fir from the north with native fraser fir. The common name is derived from the Canaan Valley in West Virginia.
